Indicator Guidance tab – Select Initial tier indicators

Leadership - PBC-DIDM Initial	Guidance	Resource
IL4. Determined if additional people need to be part of our PBC-DIDM Leadership Team	A Leadership Team is a group of people who have diverse knowledge and experiences related to PBC, professional learning, and data-informed decision making, that come together to make decision about how to support Coaches, Practitioners, and Children or their Families. The Leadership Team often includes a Program Leader who can make decisions about the coaching initiative (e.g., fiscal, time allocations), Coaches, Practitioners, and other key stakeholders (e.g., families, behavior specialists, data managers, related service providers). As new people join the program or specific decisions are being made by the PBC-DIDM Leadership Team, members of the team should discuss if additional people might need to be added to the Team.	Facilitating PBC-DIDM Leadership Team Meetings Guide
	When new members join the Team the Lead Coach (or another designee) ensures key information about the purpose of the PBC-DIDM Leadership Team is shared prior to the new member(s) participation in Leadership Team Meetings.	
IL5. A data collection schedule that includes a plan for when and how to collect data about (a) the Coaches' use of PBC and (b) the Practitioners' use of effective practices	A data collection schedule includes information about what measures will be collected, when, and by whom. The PBC-DIDM Data Mapping Tool is one way Leadership Teams might document this information.	PBC-DIDM Data Mapping Tool
IL6. A procedure in place to confirm data are being collected as planned and in a timely manner	In addition to developing the data collection schedule (see IL5) or plan, the program identifies who is responsible for verifying that appropriate data are being collected as scheduled. The PBC-DIDM Data Mapping Tool is one way Leadership Teams might consider documenting the timeline or schedule for data collection and who is responsible. Often data collection occurs within a window of time or is linked to a specific event, which allows some flexibility for rescheduling when needed.	PBC-DIDM Data Mapping Tool
	For example, a procedure might be in place to confirm: A PBC Log is on file for every coaching session All Practitioners were observed in the Fall and Spring using the formal effective practices tool Attendance information for the Workshop was saved	
IL7. A procedure in place to confirm submitted data are complete and accurate	This item is focused on ensuring data collected are complete (i.e., we have everything we planned to collect, no missing forms or missing items) and accurate (i.e., scoring is correct, every required item is scored). The PBC-DIDM Data Mapping Tool is one way Leadership Teams might consider documenting who is responsible for verifying data are complete and accurate and preparing them for the Team to review.	PBC-DIDM Data Mapping Tool
	For example, a procedure might be in place to confirm: Items on page 2 of the practice checklist were not left blank The date on the winter assessment reflected the appropriate year 1/15/26 not 1/15/25 The value reported for the total number of indicators scored yes reflects the indicators checked yes on the PBC log The space for the number of educators present during the observation was 2 not 16 (sixteen was the number of children present)
